The invention relates to novel cell lines which can support the farauges of the invention relates to novel cell lines which can support the replication and production of defective recombinant adenoviruses which lack all or part of the El and Ed regions. The novel cell lines contain the adenoviral Ed region, esp. the open reading frame 6 and/or 7, or inserted into its gene under control of a promoter, pref. from MMTV which is required by dexamethasone. The Ed ORFG may also be inserted into the genome as a chimaeric fusion gene (this sequence) comprising a quency of the cell in the absence of hormone by interaction of the cytoplasm of the cell in the absence of hormone by interaction of the cytoplasm of the fusion protein with the hormone causes translocation of the protein to the cell's nucleus were the ORFG product functions. The contacting the fusion protein with the hormone encoding the hormone binding domain with the hormone encoding the hormone. Contacting the fusion protein with the hormone encoding the hormone causes translocation of the adenoviral order sequence. The defective viruses generated in the convention of the adenoviral order sequence. The defective viruses generated in the convention of the adenoviral order sequence. The defective viruses generated in the conventions, etc.

Chyptic order of the convention of the defective viruses generated in the conventions, etc.

Chyptic order of the convention of the convention of the defective viruses generated in the conventions, etc.

Chyptic order of the convention of the convention of the convention of the conventions, etc.

THE REPORT OF THE PROPERTY OF

Halfe - made in .

The DNA construct comprises a full length copy of the Ad2 genome from which the early region I genes (EI genes) have been deleted and replaced by an expression cassette encoding CFTR. The expression cassette horludes the promoter for PGR and a poly-A addition signal from the Davine growth hormone gene. The Ad2-ORF6/PGR-CFTR construct differs from that given in Q68002 (Ad2/CFTR-I), in that the latter utilises the endogenous BIa promoter, has no poly-A addition signal directly be administered to the pulmonary airways in the gene therapy of cystic fibrosis. 88888888888888

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 4, Sequence 1, Sequence 1, Sequence 1, Sequence 1, Sequence 2, Sequence 2, Sequence 1, Sequence 2, Sequen

**Submitted (02-JUN-199) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr - Web. in www.genoscope.cns.fr : segref@genoscope.cns.fr - Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruifily.org The BDGP Drosophila melanogaster agenome using these BACs. For further information please see http://www.fruifily.org The BDGP Drosophila Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 150genic strain v2: no bw sp., the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

- Obetermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila please see http://www.fruitfly.org The BDGP Drosophila DRACOM Mammoser in Pieter de Jong slaboratory in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, Cancer Genetics at the Roswall Park Cancer Institute in Buffalo.

NY. The library is named RPCI-98 and was constructed by partial Ecogn digestion of Drosophila DNA provided by the BDGP from the Ecog digestion of Drosophila DNA provided by the BDGP from the library pland EST libraries. A more detailed description of the library pland EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library. The found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | :: :: : | ::: | ::: | ::: | ::: | | ::: | | ::: | | ::: | | :::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | | ::: | ::: | | ::: | ::: | | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | :::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gattitgaacaatattgiggtgctgtgctgcagttactgtgctgatttaagtgagatcag 701

Genomic DNA was isolated from Trypanosoma brucel (stock TREU927/4) and partially digested with Sau 3AI. DNA fragments were cloned into the Bam H1 site of PAD10SacBII vector (Genbank accession U09128). The average insert size is 65 Kb. Coverage: approx 4.4 X the haploid non-minichromosomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Human adenovirus type 40.

Human adenovirus type 40.

Yiruses; daDNA viruses, no RNA stage; Adenoviridae; Mastadenovirus.

1 (sites)

Ishino,M., Sawada,Y., Yaegashi,T., Demura,M. and Fujinaga,K.

Nucleotide sequence of the adenovirus type 40 inverted terminal repeat: Close relation to that of adenovirus type 5

Virology 156, 414-416 (1987)

On Aug 1, 1998 this sequence version replaced gi:3355439.

During sequence assembly data is comparated from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submitssion

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence has been fittle insert of clone 109F14. The true left

end of clone 32948 (287822) is at 13206 in this sequence map criteria

as follows. An attempt is made to resolve all sequencing problems,

such as compressions and repeats, but not necessarily within known

annotated human repeat sequence elements (e.g. Alu). Where the

feature key.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Teature key.

This sequence was generated from part of bacterial clone contigs of This sequence was generated from part of bacterial older the Sanger human chromosome 6, constructed in collaboration by the Sanger content chromosome 6 mapping group and loannis Ragoussis. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6/109F14 is from the library RPCII constructed at the Roswell Park Gancer Institute by the group of Pieter de Jong.     Human DNA sequence from clone 109F14 on chromosome 6p21.2-21.3. Contains the alternatively spliced gene for Transcriptional Enhancer Factor TEF-5, the 60S Ribosomal Protein RPLIOA gene, a porarrive ZNFIZI LIKE gene, and the PPARD for Peroxisome Proliferator Activated Receptor Delta (PPAR-Delta, PPAR-Beta, Nuclear Hormone Receptor 1, NUC1, NUC1, PPARB). Contains three polymorphism, complete sequence.

Submitted (26-SEP-1998) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                        Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Location/Qualifiers
                                                                                                                                                                                                                                                                                Sequence similarities were identified using Powerblast by Jinghui Zhang.

áĉ	1.1.1. COURT TAIL TO THE TAIL TAIL TO THE TAIL TAIL TAIL TAIL TAIL TAIL TAIL TAIL
Ē	Cells for produ. of recombinant adeno and adeno-associated virus
Ē	contain part of the E4 region of adeno virus, used to produce new
Ľď	adeno virus defective in El and E4 regions for use as gene therapy
PT	vectors
PS	Example 1; Page 41-43; 69pp; French.
႘	The invention relates to novel cell lines which can support the
ខ	replication and production of defective recombinant addnoviruses which,
ខ	lack all or part of the El and E4 regions. The novel cell lines contain
႘	the adenoviral E4 region, esp. the open reading frame 6 and/or /,
ខ	inserted into its gene under control of a promoter, prer . Irom MMIV which
ខ	is regulated by dexamethasone. The E4 ORFb may also be inserted into the
႘	genome as a chimaeric fusion gene comprising a glucocorticold receptor
ខ	hormone binding domain fused N-terminally to the adenoviral Okro gene.
ပ္ပ	The fusion protein generated (this sequence) is retained in the cycopiasm
ပ္ပ	of the cell in the absence of hormone by interaction of the hormone
႘	binding domain with the hsp90 protein or other factors. Contacting the
ខ	fusion protein with the hormone causes translocation of the protein to
ខ	the cell's nucleus were the ORF6 product functions. The gene was
ខ	generated by amplifying the sequence encoding the hormone binding domain
ខ	with primers T31316-7 and recombining the fragment with the adenoviral
ខ	ORF6 sequence. The defective viruses generated in the new Cells Can De
႘	used for gene therapy e.g. for cystic fibrosis, dystrophy,
႘	neurodegenerative diseases, blood coagulation disorders, Viral
ပ္ပ	infections, etc

PR Act and human FRAGI nucleic acid and related proteins - used for Rat and human FRAGI nucleic acid and related proteins - used for diagnosis of neoplasis, particularly osteosarcoma Claim 13; Fig 4; 35pp; English.

Claim 13; Fig 4; 35pp; English.

Claim 13; Fig 4; 35pp; English.

Come I (FRAGI) protein of the invention. When expressed in frame with FGFR2 (fibroblast growth factor receptor 2), the FRAGI gene with FGFR2 (fibroblast growth factor receptor 2), the FRAGI gene can be used as a hybridisation probe to detect chromosomal capormalities, particularly a rearrangement that fuses FRAGI to another companies, particularly a rearrangement that fuses FRAGI to another companies is used to diagnose neoplasia, specifically osteosarcoma.

Crearrangements is used to diagnose neoplasia, specifically osteosarcoma.

Crearrangements is used to diagnose neoplasia, specifically of Gentify related genes in other species. Agents that inhibit FRAGI (e.g. antibodies or antisons molecules) may be useful therappeutically and the FRAGI protein can also be used to screen for drugs. Antibodies are used for purification of the FRAGI protein; in cloning FRAGI alleles and the FRAGI protein; in cloning FRAGI alleles and the remains and the fraginal part and as probes in protein blots and the fraginal Rat FRAG1 protein. The present sequence represents RHK1 used from an example of the present invention which describes a Hansenula mrakil protease resistant killer protein. The killer protein has antibacterial activity and so can be used in an antibacterial agent which contains the killer protein as the active component. The killer protein can also be used as the active component in an antibacterial soop. The protein, which was derived from the yeast Hansenula mrakil, has antibacterial properties and may be used in sterilising and cleaning compositions e.g. soap. recombinantly in a large amount.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          112 MMIHGY-----ESWALHCHCSSPGSLQCIAGGQ-----VLASWFRMVVDGAMFNQRF 158
